

Jewel *Winter Maintenance*

The power of people in combination with technology is crucial to successfully tackle the unpredictable weather in winter. That is why Jewel builds its products based on practice. Jewel Winter Maintenance provides staff insight and control over their work. Inside the office, planners and work planners have insight into the progress, optimising the spreading routes.

Jewel responds to the interaction between people outside and in the office. The team is connected via apps on a tablet and via a browser, and paper is becoming increasingly unnecessary.

Digital map

The app shows the colleagues outside all the information about the work to be done. The route is displayed on a geographical map and spreading data, such as the estimated action time and spreading and driving kilometres. The navigation provides clear instructions to the driver. The moment a street is sprinkled, it changes colour on the map. This allows colleagues to check their work themselves at any time. In addition, this is also transparent for the people in the office. The digital map also makes collaboration within the team easier.

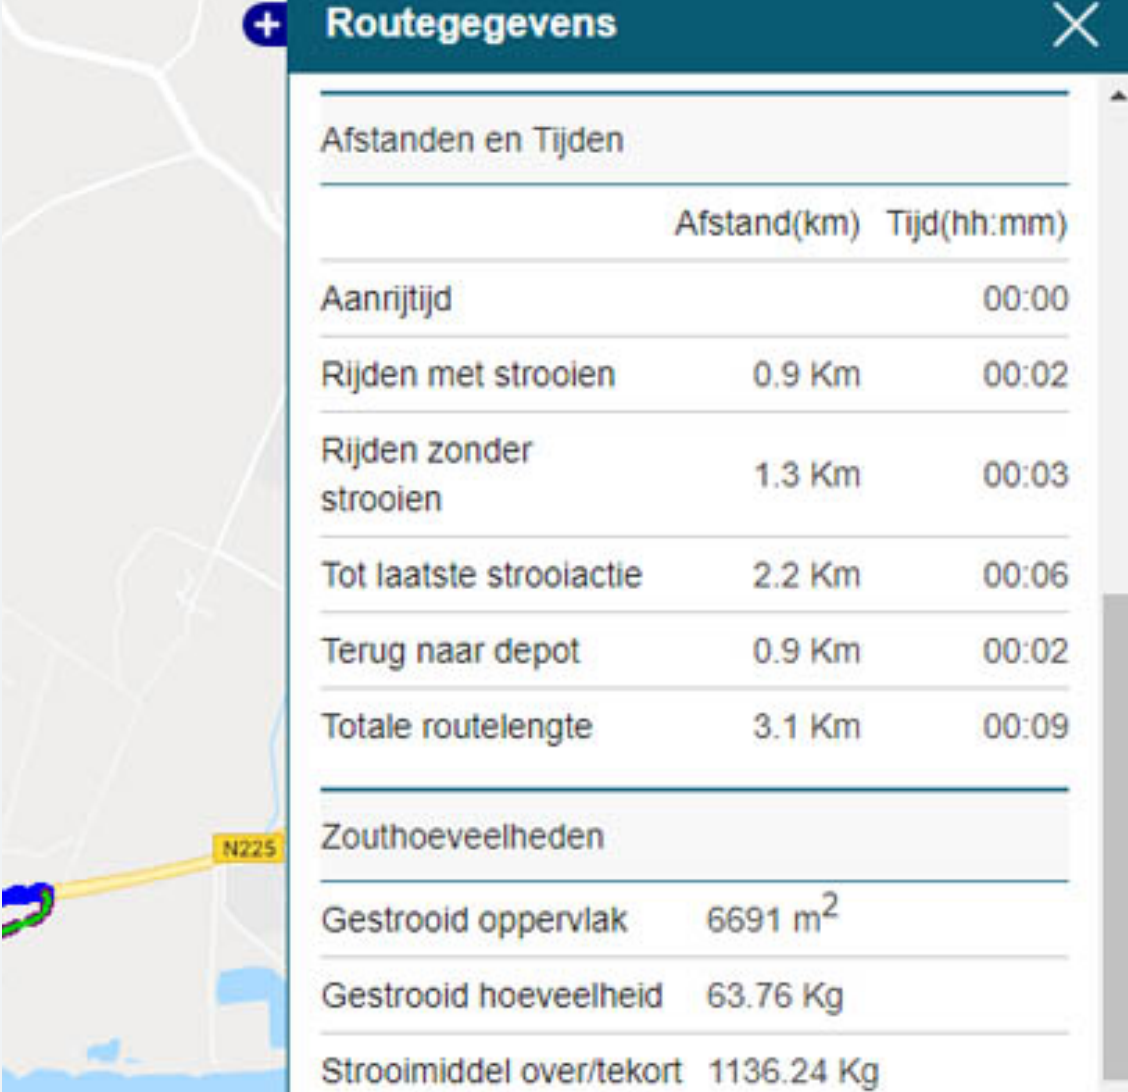

Flexibility in route management

Changes in the road network are easy to absorb. Algorithms are used to recalculate routes, so your routes are always up-to-date. Adjustments are easy to make, which means less stress in winter preparation.

Transparent accountability

The colleagues inside see the results of the work performed directly in the web application. That way, they know what still needs to be done, and nothing is overlooked. Furthermore, as all work performed is kept up-to-date in the same web application, transparent accountability towards your organisation and the client is easy.

Routegegevens		
Afstanden en Tijden		
	Afstand(km)	Tijd(hh:mm)
Aanrijtijd		00:00
Rijden met strooien	0.9 Km	00:02
Rijden zonder strooien	1.3 Km	00:03
Tot laatste strooiactie	2.2 Km	00:06
Terug naar depot	0.9 Km	00:02
Totale routelengte	3.1 Km	00:09
Zoutheveelheden		
Gestrooid oppervlak	6691 m ²	
Gestrooid hoeveelheid	63.76 Kg	
Strooimiddel over/tekort	1136.24 Kg
