

Jewel

Grounds Maintenance

From Challenges to Solutions

From guesswork to fully connected, data-driven operations. Jewel puts you in control. Built on real-world practice, our software empowers both field crews and office teams with full insight, real-time progress, and tools that make every task easier and more efficient.

Inefficient Planning

Field teams drive unnecessary distances, wasting resources and slowing progress.

No Real-Time Insight

Cannot see what is done, what is left, or where help is needed.

Clunky Software

Systems frustrate employees and discourage use, especially for workers with limited technical skills.

Resident Reports Drag On

Complaints require manual searching for incomplete or missing records.

Disconnected Systems

Across platforms, creating double work and gaps in communication.

Optimized Routes

Jewel plans the smartest routes, reducing travel time, fuel use, and operational costs.

Live Tracking

Managers and coordinators see progress instantly, enabling quick adjustments when needed

Intuitive Apps

Designed with field operations in mind, Jewel is easy to learn and quick to use, even for those with little digital experience.

Instant Data Access

Every task is logged, so employees can answer queries like "When was my street cleaned?" in seconds.

Seamless Integrations

Jewel connects with mapping and AI detection tools, turning observations into actionable tasks without extra admin.

Real-Time Info

Field teams see exactly what needs to be done, linked to points, surfaces, and streets. No local knowledge required in the minds of field workers. As tasks are completed, the map updates in real time. Everyone stays aligned, from tablet to office.

Transparency. Connectedness. Teamwork.

Transparent Reports

Colleagues inside gain real-time insights through the live dashboard. It makes it easier to spot what still needs to be done and ensures nothing is missed. Thanks to stored data, you can analyze performance over time and make informed decisions. Interactive reports provide transparent accountability, both internally and towards clients.

Insight. Control. Clarity.

Get Control Over Your Work Processes

- Mowing
- Weed control
- Street sweeping
- Pest management
- Emptying litter bins
- Watering trees
- Fly-tipping control
- Graffiti removal
- Gully cleansing
- Overgrowth control
- Street cleansing
- ... and many more!

AI-Powered Inspections

Transform the way you inspect and manage public spaces. Cameras capture images while driving through the area. AI detects issues like weeds, litter and overgrowth. After review, tasks are made in Jewel. Teams receive them on their tablets, complete the work and report back in real time. This reduces inspections, speeds up responses, and improves the quality of public spaces.

Efficient. Automated. Reliable.

Outstanding Support

Support is the silent force behind every successful onboarding. With an average score of 4.87 out of 5, our support team makes a daily difference.

Dedicated. Knowledgeable. Involved.

What Our Customers Are Saying

- ▶ Smarter planning and routing
- ▶ Real-time visibility and control
- ▶ Real-time insight for planners
- ▶ Better collaboration across teams
- ▶ Intuitive and user-friendly apps
- ▶ Fast, step-by-step onboarding
- ▶ Proactive and ongoing onboarding
- ▶ Accessible, fast and personal support

Huntingdonshire's Journey with Jewel

"Straight away, Jewel just looked different, it felt like it was built by people who actually work in operations."

"The map shows exactly what's been done and what hasn't, no more guesswork."

"It's perfect for covering someone else's route.
You've got all the info at your fingertips."

"It's made everyone's job easier, both in the field and in the office."

"Now we can fine-tune routes based on real usage.
That's where the real optimization comes in."

"I've tried a few systems in my career. Nothing comes close to Jewel."
